

## Revision List - aiming for a C grade

To achieve a C grade at GCSE your first priority is to maximise marks on the first half of each exam paper.

"If you work effectively up to the staples a C grade is almost guaranteed"

*Quote from Mr Sandhu*

Here are your key topics - perfect them...

C/D-grade Topics	Tick
Estimating the mean	
Pythagoras' Theorem	
Creating and solving equations	
Ratio	
Volume of Prisms	
Scatter Diagrams	
Experimental Probability	
Area/Circumference of a Circle	
Transformations	
Area of Compound shapes	
Best Value/Currency conversion	
Prime factors	
Expanding/factorising expressions	
Speed/distance/time	
Sequences - Nth term	
Questionnaires	

These topics almost always come up on one of your exam papers.

### Remember...

- For a C grade you need to be looking at 60 marks over both papers - that's only 30 out of 100 on each paper!!

To get yourself over that 60 mark go and check out the B grade topic checklist - there will be some topics there that you can also do well on.
